

ON TIME

The Discovery Centre must launch during the centennial of Fleming's great discovery. Decoupling its delivery, by housing it in a retained and extended historic bay, both ensures this critical date is met and lends it a familiar, welcoming character.

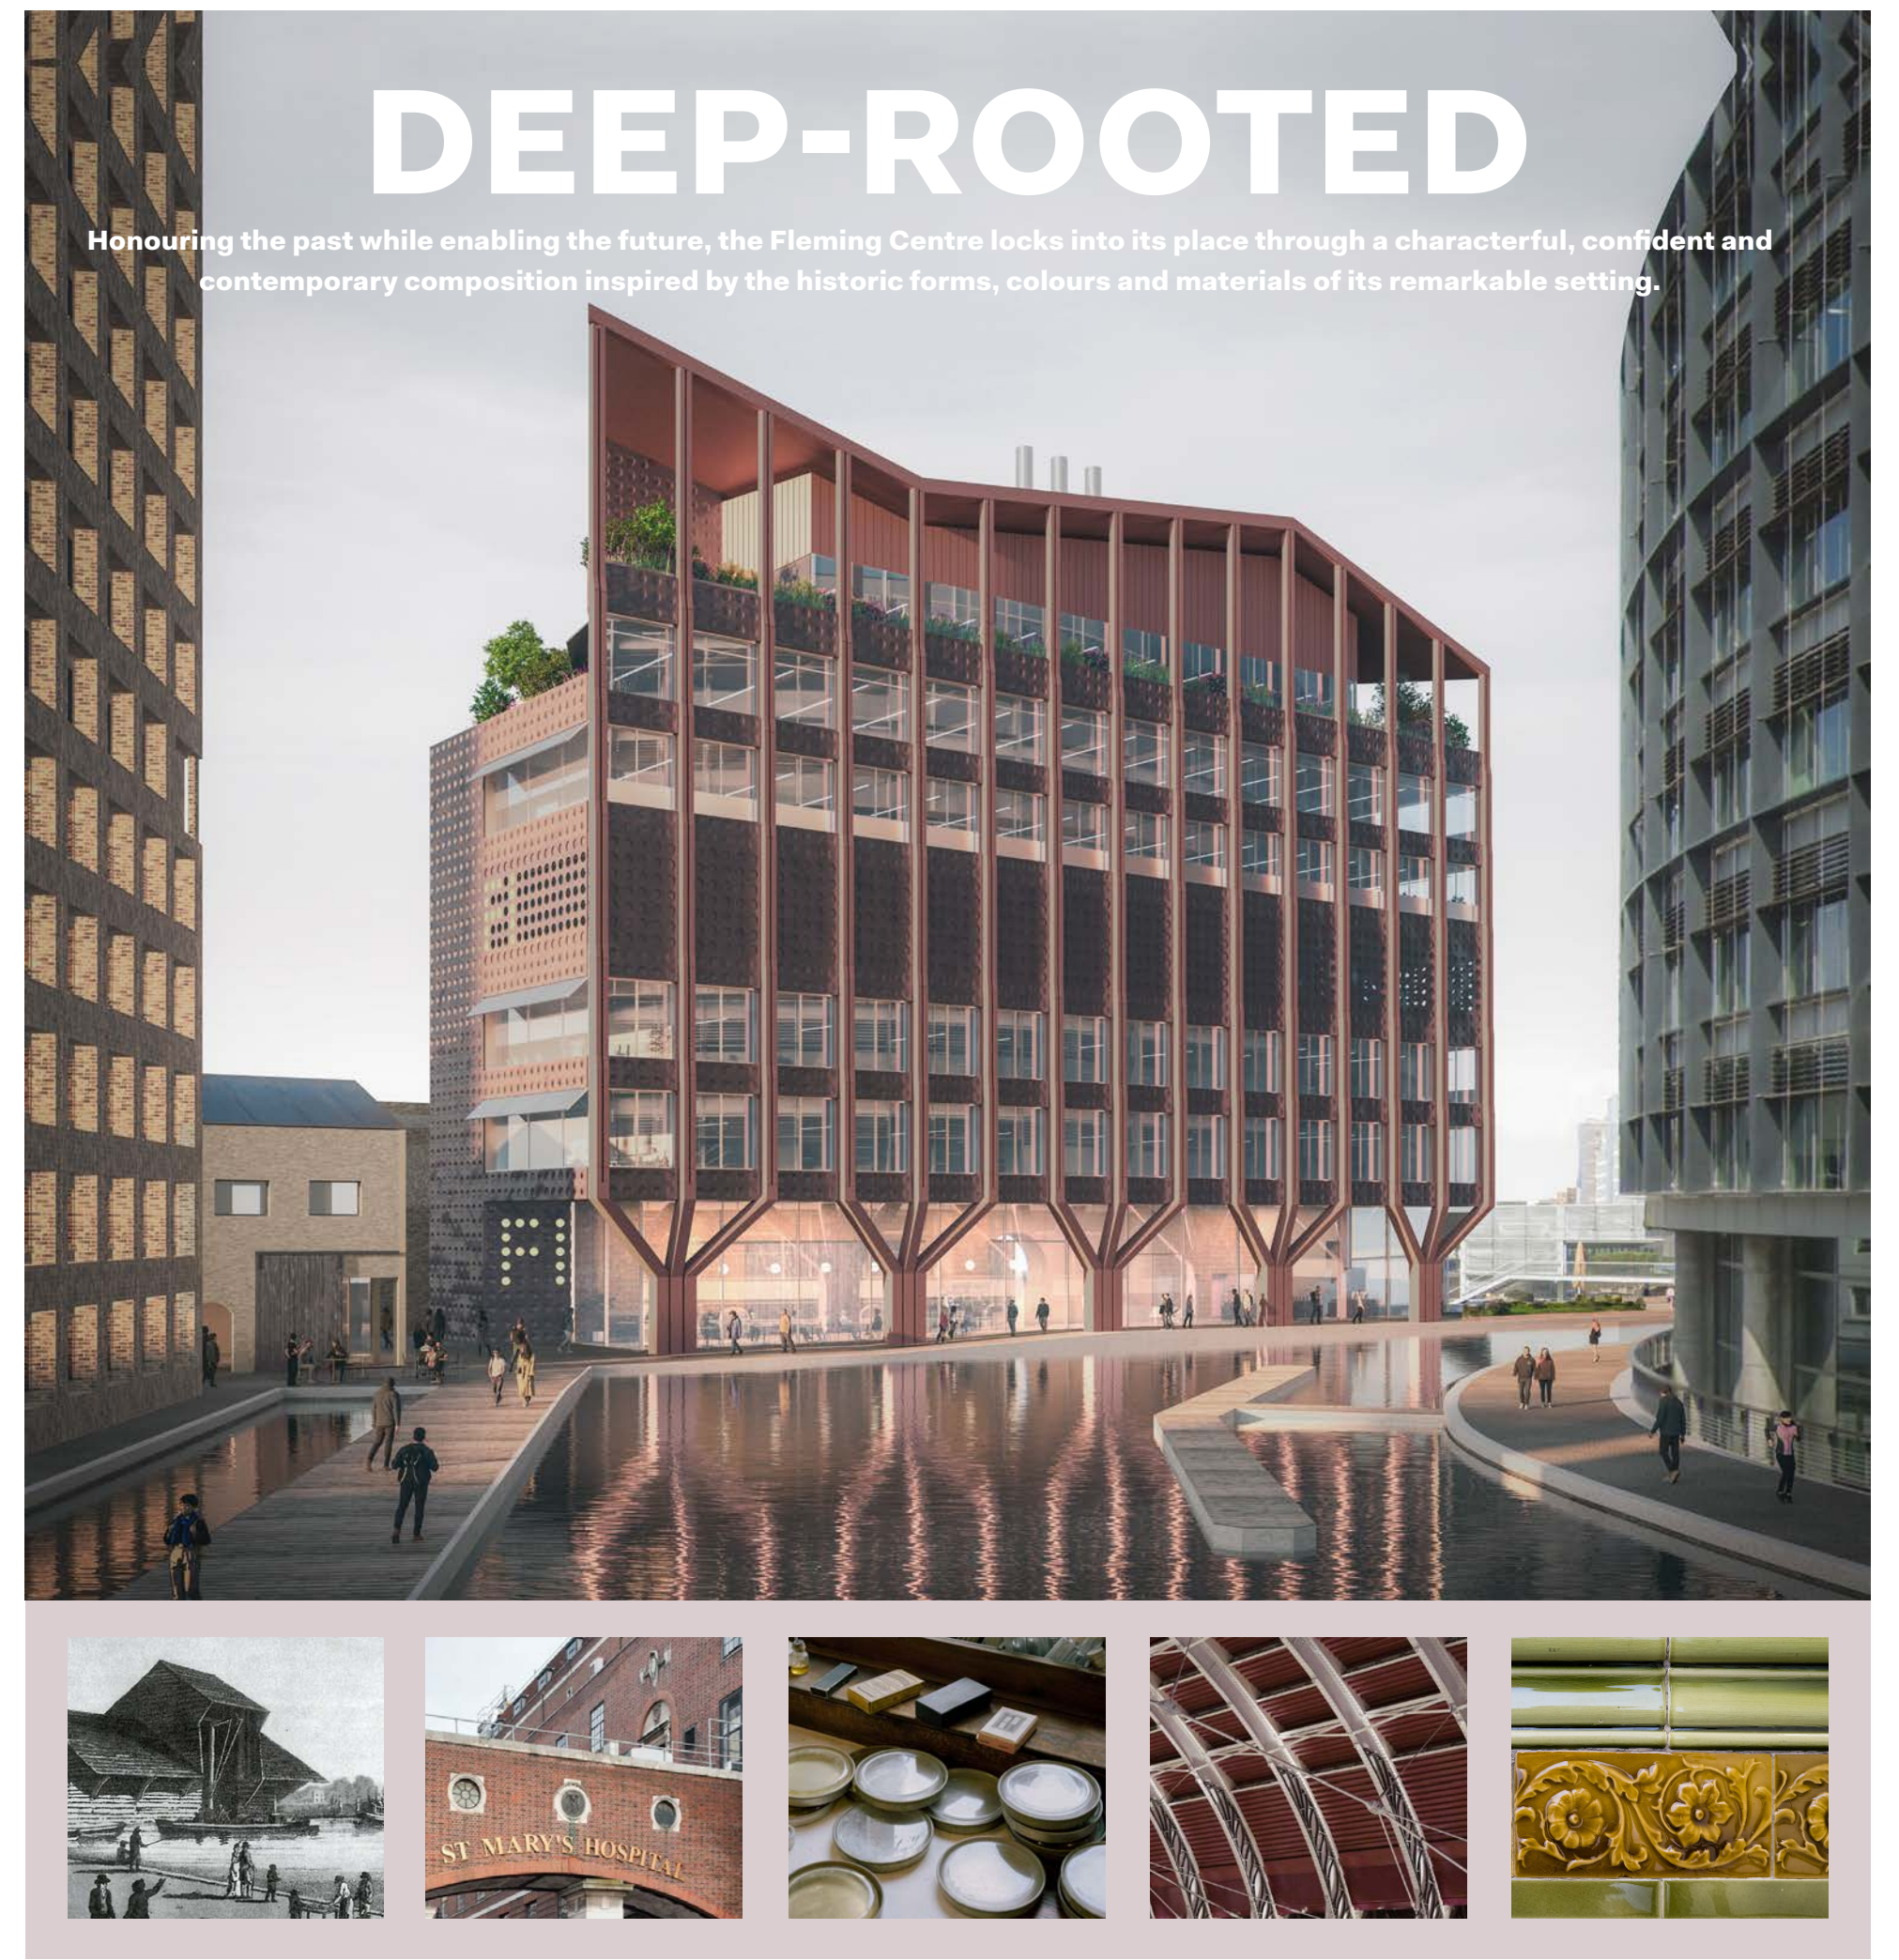

CONNECTED

The Fleming Centre connects people from all walks of life, interwoven in a welcoming and permeable building, and stitched into its context via transformative new routes, enticing public spaces and visible connections between the station, canal and hospital.

DEEP-ROOTED

Honouring the past while enabling the future, the Fleming Centre locks into its place through a characterful, confident and contemporary composition inspired by the historic forms, colours and materials of its remarkable setting.

SUSTAINABLE

Taking care with carbon, the Fleming Centre embodies material, energy and carbon efficiency. Retained structures, repurposed materials and natural finishes combine with new landscapes that fill both interior and exterior spaces with greenery and warmth.

FUTURE READY

A highly flexible structural frame, column free floor plates and resilient servicing strategy will enable the Fleming Centre to adapt to changing needs, facilitating emerging new directions in research, treatment and engagement.

ENGAGING

The beacon-like Fleming Centre reaches out, welcoming all to a memorable space for learning and an inspiring place to help shape the future of global health. An integrated learning landscape encourages the passing public to get curious and come in.
